
VCE UNITS INFORMATION

VCE PRODUCT DESIGN AND TECHNOLOGY UNITS 1 AND 2 CONTINUED

ASSESSMENT

Students undertake a variety of assessment tasks throughout the course including the production of a design folio, research tasks and one or more production activities. Training in the safe and competent use of appropriate machines and tools is included.

Please Note: A subject levy applies to this subject (see Subject Cost Schedule for details).

“Year 11 Product Design and Technology was an enjoyable class that broadened my understanding about the design processes and production. It provides an insight to the way the construction industry works and offers the initial necessities to that industry. Throughout the year, both group projects and individual projects were constructed. Overall, this enhanced both the individual woodwork and teamwork skills. One main unit of study throughout the year was sustainability. This unit focused on the product’s life and the 3 main areas of sustainability. Over the year, I created a cheese board, meat tray and iPad/recipe book holder which I took home throughout the year. It enhanced my skills and broadened my knowledge about the construction, designing and process taken when creating a project. All of these skills are then relevant for Year 12 Product Design and Technology, only to be further explored and more in depth throughout Year 12. If you have a vast imagination or like to create creations across a vast areas of design styles, Year 11 Product Design and Technology is the subject for you.”
