
YEAR 10 SUBJECTS

Art – 3D

Art – 3D involves a specialised study in the areas of jewellery, ceramics and construction, and you will create artworks from these areas.

A range of 3D materials will be used as you experiment with and explore concepts. Through the application of your knowledge of art practice, you will respond to ideas and demonstrate an aesthetic understanding, combining your knowledge of arts elements, skills and processes with imagination, perception and personal style. Your folio of work will represent your thinking and working practices.

You will learn about local and international artists from the past and present, taking into account social, cultural and historical issues and traditions.

Subject specific skills are:

- You will be able to analyse the techniques and creativity of known sculptors and/or jewellers
- You will experiment with and explore a range of media and techniques, including model making
- You will develop skills in a range of 3D construction techniques

Please Note: A subject levy applies to this subject (see Subject Cost Schedule for details).
