# YEAR 10 SUBJECTS

---

---

## Digital Photography

Digital Photography focuses on developing skills in planning, shooting and manipulating photographs through a digital medium. You will use a folio, digital camera, and the Adobe Creative Suite to follow a design process in order to brainstorm, plan, execute and enhance your photos before printing them for final presentation. All photos are shot using a digital camera, with many shoots happening outside of class time. The key program used for the manipulation of images is Adobe Photoshop. Production planning/elements and theory are an important part of the curriculum, as well as design elements and principles.

Subject specific skills are:

- You will use freehand drawing in the creation of thumbnail sketches and shoot plans
- You will understand layout and composition using rules and conventions
- You will use the digital camera to capture your images
- You will use the computer as a tool for manipulation of your images
- You will develop a folio of work through:
  - Use of the Design Process to develop the plans and ideas used for the shoot
  - Use of technology to capture and manipulate the images and document the process through print screens and annotation
  - Use of the Design Process to consider final presentation and exhibition of work

**Please Note: Students will need their own digital camera. A subject levy applies to this subject (see Subject Cost Schedule for details).**

*"I learned a lot of new things when I decided to study Digital Photography like settings on the camera, how to best use different angles, types of photography and of course how to use Photoshop like a pro. I had fun using my imagination to recreate a fairy tale, experimenting with different props and angles to create a magical image. If you are a creative person who enjoys exploring new opportunities, then Digital Photography is definitely for you!"*
