
YEAR 10 SUBJECTS

Furniture Construction

Furniture Construction allows you to focus on the design and production of a piece of furniture that incorporates a range of construction and finishing methods. Projects could include tables and framed constructions. You will be encouraged to design a product that suits your individual needs and that incorporates a range of skills, processes and materials, including materials other than wood. You will research a range of construction methods so that informed decisions can be made in the production of your work. This work will be presented in a design folio.

Subject specific skills are:

- You will develop an understanding of the stages involved in designing and making a product, researching, design and production planning, documentation and evaluation, including the production of detailed working drawings and project costing
- You will develop your skills in freehand sketching and techniques to visually communicate design ideas to others
- You will develop skills in a range of furniture construction techniques
- You will develop competency in the safe use of a range of machines and tools, and how to select the appropriate tool/machine and process for specific tasks

Please Note: A subject levy applies to this subject (see Subject Cost Schedule for details).

“The Year 10 Furniture Construction course is a great opportunity to learn the basics of design and construction in a workshop environment. Furniture Construction is a good subject to have completed before VCE Product Design & Technology. The subject will teach you how to make a folio and bring your designs to the flesh in the hands-on component of the course. Furniture Construction will teach you important skills, and you will also have a piece of furniture to take home to show off your hard work.”
