

Maximising our Assets

A combined Middle School complex will be created on the Keilor grounds, providing greater access to a wealth of existing and new resources.

The current Junior School building will be renovated and refurbished to meet the requirements of a modern Middle School learning environment, as well as building a new facility adjacent, to cater for Year 5 to Year 8 students. The old Middle School portables on this campus will be removed.

These state-of-the-art facilities will be home to exciting, new, future-focussed programs for our Middle School students and will provide a more rewarding experience for the teachers who strive to make a difference in their students' lives.

Situated close to our newly acquired land, the Middle School will be connected to the planned garden-farms that will complement our new food technology programs.

All Middle School students will share specialised College resources with Senior School students, such as advanced science laboratories, computer laboratories, and music, drama and sporting facilities, in order to enrich their learning.

Middle School students will be able to explore and excel on their own education pathway, and they'll all be able to look forward to an easier transition to Senior School on a familiar campus among familiar faces.
